

THE ORANGE CART PLAYBOOK

BRAND & FOUNDER EDITION

You own the product. Now build the machine.

The affiliate-first system that took two brands in two unrelated categories to \$65K+ in six months on TikTok Shop — with 80% of it driven by creators, not the founder's own account.

For founders & brand owners who have a product on TikTok Shop and want a repeatable GMV engine.

EDITION VALUE

\$197

READ THIS FIRST

You don't have a content problem. You have a system problem.

Most brands treat TikTok Shop like a megaphone: post, hope, repeat. The brands that scale treat it like a factory — a repeatable line that recruits creators, ships samples with a known return, and hands every one of them a script that converts.

This edition is written for the person who signs the invoices. Every system here is framed around the two questions a founder actually asks: **what does it cost, and what does it return?** The headline answer — roughly **\$18 of GMV per sample shipped**, holding across two unrelated categories — is what lets you stop guessing and start budgeting.

Read Parts 00–07 for the full engine. Then Part 08 makes it *your* product's engine, and Part 09 is a 90-day plan you can hand to a VA tomorrow.

WHO THIS EDITION IS FOR

You have a product live (or nearly) on TikTok Shop. You've maybe posted from the brand account and watched it flatline. This edition hands you the exact engine that made creators — not you — the growth driver, and shows you how to fund it like a media buy with a known return.

CONTENTS

What's inside

- 00 The Proof — two brands, one system · **real**

- 01 The Model — the volume engine · **mindset**

- 02 The Content Engine — the framework · **copy**

- 03 The Hook Lab — stop the scroll · **copy**

- 04 The Affiliate Engine — 80% of the money · **growth**

- 05 Compliance & Trust — don't get pulled · **safety**

- 06 The Production Line — the factory · **ops**

- 07 CX & Reviews — retention · **ops**

- 08 Apply It To Your Brand · **you**

- 09 Your First 90 Days · **plan**

- + The Vault — 9 plug-and-play templates · **tools**

Two brands. Two unrelated worlds. One system.

This isn't theory pulled from a webinar. Everything in this playbook was run across a live TikTok Shop portfolio for six months — one brand in wellness, one in plant care. Two audiences that share nothing. The same engine drove both.

\$65K+

GMV IN 6 MONTHS ACROSS
THE TWO SHOPS

~3,000

PRODUCT SAMPLES SHIPPED
TO CREATORS

~\$18

GMV PER SAMPLE SHIPPED —
IN **BOTH** CATEGORIES

THE NUMBER THAT PROVES IT'S A SYSTEM, NOT LUCK

Ship a sample, get about **\$18 in GMV back**. That figure came out nearly identical for a colloidal-silver supplement and a bottle of organic plant spray — two products with zero overlap in buyer, price, or use case. When the same input produces the same output across unrelated markets, you're not looking at a lucky video. You're looking at a **repeatable machine**. This playbook is that machine.

Figures are rounded from a real 6-month TikTok Shop portfolio. Exact revenue and brand identities are withheld by design — the point isn't the brands, it's that the same numbers show up no matter what you sell.

01

Stop trying to go viral. Build a machine instead.

The single mental shift that separates brands doing \$2K/month from brands doing \$30K/month on TikTok Shop.

The affiliate-first volume engine

Almost everyone starts TikTok Shop the same wrong way: they try to make **one** video go viral off their own account. Then they wonder why 5,000 views turned into three sales.

Here is what the data actually says. Across the portfolio, roughly **80% of all GMV came from affiliate creators** — other people posting about the product — not from the brand's own account. And of the thousands of videos those creators posted, only about **6–11% ever produced a single sale**.

Read that twice. **Nine out of ten videos sold nothing**. And it didn't matter, because the tenth one paid for all of them. That is the whole game.

You don't need a viral video.

You need a hundred at-bats and a system that keeps swinging.

The three laws of the engine

Law 1 — Volume beats brilliance

One brand-perfect video is one lottery ticket. Fifty good-enough creator videos are fifty tickets, in fifty different feeds, with fifty different audiences. The brand that ships more **at-bats** wins — not the brand with the best single edit. Your job is not to be a filmmaker. Your job is to run a content factory that never stops.

Law 2 — Creators are the distribution, samples are the fuel

You will never out-post an army of creators from one account. So you don't try. You put product in creators' hands and let their audiences do the reach. At ~\$18 of GMV per sample shipped, a sample isn't a cost — it's a **media buy with a known return**. That reframes your entire budget.

Law 3 — The system is the moat, not the video

Any single video can be copied. A repeatable pipeline — find creators, screen them, ship samples, hand them a script that converts, stay compliant, scale the winners — cannot. Competitors see your winning video. They never see the machine behind it. This playbook builds the machine.

The five gears

Every part that follows is one gear in the same engine. Miss one and the machine grinds:

GEAR	WHAT IT DOES	COVERED IN
Content	A framework that makes any video convert, not just entertain	Part 02 & 03
Creators	Find, screen & fuel the army that distributes it	Part 04
Compliance	Keep the machine from getting shut off	Part 05
Production	Turn scripts into finished videos at volume	Part 06
Retention	Turn buyers & reviewers into repeat GMV	Part 07

02

Every video that sells is built the same way.

The 5-part content framework behind the portfolio's best-performing videos — and the 7 angles that keep the feed fresh.

The 5-part framework behind every selling video

Entertaining videos get views. **Structured** videos get sales. This is the skeleton under every high-converting TikTok Shop video — a 30-second arc that walks a stranger from scroll to cart.

BEAT	TIMING	THE JOB OF THIS BEAT
1. Hook	0–3s	Stop the scroll. A pattern interrupt, bold claim, or the viewer's exact pain said out loud. If the hook fails, nothing else matters.
2. Problem	3–8s	Agitate one real, daily frustration. Use "you." Make them feel seen before you sell anything.
3. Solution	8–15s	Introduce the product as the natural answer. Show it in action. One or two features — never a feature dump.
4. Proof	15–22s	Reviews, before/after, a number, a real result. UGC-authentic beats polished. This is where trust is won.
5. CTA	22–30s	One clear instruction. "Tap the orange cart." Remove friction. Add honest urgency only if it's real.

WHY THIS ORDER AND NO OTHER

People buy in a sequence: **attention** → **recognition** → **belief** → **action**. Hook earns attention. Problem earns recognition ("that's me"). Solution + Proof earn belief. CTA converts belief into action. Skip a beat and you ask for the sale before you've earned it — which is why most videos "get views but no sales." They jumped to the CTA.

A video with no Proof is a claim.

A video with no Problem is **an ad nobody asked for.**

The 7 content pillars — so you never run the same angle twice

The framework is the skeleton. The **pillar** is the angle you approach it from. Rotate these so a viewer never sees the same setup two videos in a row — that's what kills a content account.

PILLAR	WHAT IT IS	BEST FORMAT PAIRING
Pain Point	Lead with the problem the product solves	Story / talking head
Demo / Tutorial	Show the product in use, how-to style	Screen-close, hands-on
Social Proof	Reviews, reactions, testimonials	Reaction / green-screen
Lifestyle	Product woven into a real daily routine	Morning-routine / vlog
Trend-Jack	Adapt a trending sound/format to the product	Whatever's trending
Comparison	Us vs. the old way (never name a competitor)	Side-by-side / before-after
Behind the Scenes	Brand story, sourcing, quality, "every mg on the label"	Founder / factory

The weekly rotation

Don't decide what to post each day — that's how consistency dies. Assign the pillar in advance and only decide the *execution*:

DAY	PILLAR	DAY	PILLAR
Monday	Pain Point	Friday	Lifestyle
Tuesday	Demo / Tutorial	Saturday	Comparison
Wednesday	Social Proof	Sunday	Behind the Scenes
Thursday	Trend-Jack	(The Vault ships this as a fill-in calendar.)	

Voice rules that separate "converts" from "cringe"

- **Write how people talk, not how brands write.** If it sounds like a commercial, rewrite it.
- **You-copy, not we-copy.** Count "you/your" vs "we/our" before shipping. Aim 3-to-1 for *you*.
- **Be specific, kill "amazing."** "Golf-ball to grape in four weeks" beats "amazing results" every time.
- **One emotion per video.** Fear, hope, or surprise — pick one. Three at once dilutes all three.

- **The hero is the customer.** If a line makes the brand the star, rewrite it. You're the guide, not the hero.

03

The first two seconds are the whole job.

How to write hooks that stop the scroll — the patterns, the formats, and the view benchmarks behind them.

Hooks: the 2 seconds that decide everything

If the hook fails, the perfect script behind it is never seen. This is the highest-leverage copywriting you will ever do — and it follows patterns you can reuse forever.

The proven hook patterns

These structures tested best across the portfolio and the wider category. Don't copy the words — copy the *shape*, then fill it with your product's pain and payoff.

PATTERN	THE SHAPE	EXAMPLE SKELETON
Problem → Solution	State the pain, promise a reveal	"My [X] had [problem] for months. I tried this and here's what happened..."
POV Empathy	Put them in the moment of relief	"POV: you finally find something that actually works for [problem]."
Time-stamped update	Specificity = credibility	"120-day update. Honest results."
Loss aversion / FOMO	Warn before they waste money	"If you have [problem], watch this before spending on [expensive alternative]."
Audience call-out	Name the exact person	"[Specific person] — you NEED to know about this."
Skeptic-to-believer	Earn trust by admitting doubt	"I almost didn't buy this. I was wrong."
Daily-routine reveal	Curiosity gap on a habit	"I add one of these every morning. This is what changed."

HOOK-WRITING RULES

- **Curiosity or specificity — not both.** "120 days later" is specificity. "What I do every morning" is curiosity. One per hook.
- **Avoid superlatives.** "Best," "miracle," "revolutionary" trigger both ad rejection and viewer skepticism.
- **Read it out loud.** If it sounds like an ad, rewrite. If it sounds like a friend texting you, ship it.

Pair the hook with the right format

A hook is only half a video. The **format** is the visual structure it lives in. These are the formats that consistently drove the most reach in-category — use the view range as a rough signal of which structures the algorithm rewards, then pick the one that fits your hook.

FORMAT	BEST FOR	REACH SIGNAL*
Reaction	Social proof, delight, "watch this happen"	Very high
Emotional close	Personal story, stakes that matter	Very high
Before & After	Problem → solution, transformation	High
The "reveal" story	The moment everything changed	High
Authority reaction	Expert / pro weighs in	High
Comparison (old way vs new)	Problem → solution	Medium-high
Morning routine	Lifestyle, habit, daily use	Medium-high
Educational explainer	How it works, the mechanism	Medium
Unboxing + review	First impressions, trust	Medium

*Directional, from real in-category performance. Your mileage varies by niche — treat this as "where to place your bets first," then let your own data re-rank it. The two highest-reach formats (Reaction and Emotional close) should appear in every batch you produce at least once.

The customer-language method — where hooks actually come from

The best hooks aren't invented. They're **mined**. Your customers already say the words that convert — in reviews, in support tickets, in the comments. Your job is to steal them.

1 Harvest the exact phrases.

Pull direct language from reviews, DMs, and comments. Keep the grammar imperfect — "he's not himself anymore" converts; "reduced vitality" does not.

2 Sort into Pain vs. Payoff.

Pain phrases open hooks and Problem beats. Payoff phrases power Proof beats (in testimonial form — see Part 05).

3 Map to awareness stage.

A "problem-aware" viewer needs their pain named. A "most-aware" viewer just needs the price and the cart. Match the hook to where they are.

4

Feed winners back in.

Every week, the hook that won becomes the seed for next week's variations. The library compounds.

THE 5 AWARENESS STAGES — MEET THEM WHERE THEY ARE

Unaware (educate) → **Problem-aware** (name the pain) → **Solution-aware** (position your category) → **Product-aware** (why yours) → **Most-aware** (offer + remove friction). Most TikTok Shop videos should target Problem-aware or Solution-aware — that's where the volume is.

04

This is the part almost nobody runs. It's 80% of the money.

The affiliate creator engine: find them, screen them, fuel them with samples, and forecast the return before you spend a dollar.

The funnel that turns samples into GMV

Content is the product. Creators are the distribution. This is the machine that recruits an army to post for you — and the reason ~80% of the portfolio's GMV existed at all.

The five-stage creator funnel

Every affiliate dollar flows through the same pipe. Know your numbers at each stage and you can forecast revenue like a factory forecasts output.

STAGE	THE ACTION	THE LEVER
1. Reach out	DM creators at volume with the offer	Volume + a clear, honest offer
2. Sample request	Interested creators request free product	Offer clarity; commission rate
3. Screen & approve	You approve the right ones only	This is the profit lever
4. Deliver & brief	Ship the sample + hand them a script	The brief (Parts 02–03)
5. Post & sell	They post; a fraction drive sales	Volume × brief quality

SCREENING IS WHERE THE MONEY IS MADE OR LOST

Across the portfolio, only **7–30% of sample requests got approved**. That range is not indecision — it's the single biggest cost lever you control. Every sample you ship to a wrong-fit creator is money and product burned for a video their audience won't buy from. Approve like the product is coming out of your own pocket — because it is.

**A sample isn't a giveaway.
It's a \$18 media buy — but only if you screen who gets one.**

The screening scorecard

Before you approve a creator, run them through this. It's the exact logic that keeps the ~\$18-per-sample return healthy. (The Vault ships this as a scored spreadsheet.)

CHECK	APPROVE IF...	REJECT IF...
Category fit	Their niche overlaps your buyer	Zero topical overlap
Real human	A real person appears on camera	Faceless / AI / product-only
Content style	Authentic, varied, talks to camera	Only "SALE 50% OFF" reposts
Audience match	Followers look like your customer	Wrong age/gender/geo entirely
Track record (GMV)	Meets your tier threshold	Below threshold <i>and</i> weak fit

THE TIERED RULE THAT SCALES

Set a GMV threshold, then tier it: **above the threshold**, approve any real human (proven sellers earn a shot). **Below it**, approve only on strong category + audience fit. This lets you say yes to volume without shipping product to people who'll never move a unit.

Forecast before you spend

Because ~\$18 GMV/sample held across two unrelated categories, you can budget like an operator instead of gambling:

THE FORMULA

Samples shipped × GMV-per-sample = forecast GMV

Ship 200 well-screened samples at a conservative \$15–18/sample → **~\$3,000–3,600 in forecast GMV** from that cohort.

Track your *own* ratio for a month, then replace \$18 with your real number and the forecast gets sharper every cycle. This one formula turns "I hope this works" into a plan you can fund.

Outreach at volume

The top of the funnel is a numbers game — the portfolio sent **hundreds of thousands of creator DMs** to fill it. You don't do that by hand; you do it with tooling (TikTok Shop's affiliate tools, Cruva-style outreach platforms,

automations). The principle: **keep the top of the funnel wide, keep the approval gate narrow.** Wide top = enough at-bats. Narrow gate = healthy return per sample.

05

One disabled ad can cost more than a weak hook ever will.

The claims framework that keeps regulated products (supplements, health, beauty) selling without getting pulled.

How to make bold claims without getting shut off

Compliance failures are the #1 reason TikTok and Meta disable creative — and the #1 silent killer of a TikTok Shop brand. The fix isn't to be boring. It's to know exactly where the line is.

The dividing line

Your **brand voice** stays in *structure-function* and *wellness-support* language. Any outcome-heavy, transformation language belongs in **customer-testimonial form only** — and clearly framed as the customer's experience, not your claim.

✓ You MAY say (brand voice)

- "Supports..." / "may help..." / "promotes..."
- "Many customers report..."
- Ingredient + mechanism ("beta-glucans support natural immune defenses")
- "Developed with [experts]" / "[X]-approved formula"
- Materials, sourcing, "every mg on the label"
- Guarantees & risk-reversal ("90-day money-back")

✗ Never say (as your claim)

- "Cures / treats / eliminates / shrinks"
- Named diseases or conditions
- "Clinically proven to [outcome]"
- "FDA approved" (for a supplement)
- "Guaranteed to work"
- Replacing a prescription or medical care

THE TESTIMONIAL ESCAPE HATCH

Your brand is in the structure-function lane. Your **customers are not**. Outcome language *is* allowed when it's unmistakably a customer's lived experience — "Six weeks in, she said his lump went from golf-ball to grape" — not the brand asserting it. The tell: could a skeptical regulator read it as *you* making a medical claim? If yes, reframe it as *them* saying it, or cut it.

Say this, not that

TEMPTED TO WRITE	USE INSTEAD
"Shrinks [problem]"	"Daily [category] wellness support"
"Cures [condition]"	"Helps maintain a normal [function]"
"Will fix your..."	"May help support..." / "Customers report..."
"Doctors recommend"	"Developed with [experts]" / "[X]-approved"
"Proven to [outcome]"	"Made for [the benefit], the honest way"
"Order now or [fear]"	"Try it risk-free with our guarantee"

The pre-flight checklist

Run this on every script — yours and every creator's — before it ships. (Vault includes it as a one-page printable.)

- ☐ No "cures / treats / eliminates / shrinks" applied to the product
- ☐ No named diseases or medical conditions
- ☐ No "FDA approved" or "clinically proven to [outcome]"
- ☐ No prescription-replacement claim in brand voice (testimonial framing only)
- ☐ Every outcome claim is in customer-quote form, attributed to the customer
- ☐ No "guaranteed to work" — only "may help" / "customers report"
- ☐ CTA is friction-removing, not fear-based ("tap the orange cart," not "before it's too late")

**A slightly weaker hook that runs
beats a stronger hook that gets pulled.**

This is general operating guidance from running regulated categories on TikTok Shop — not legal advice. For your specific product and market, confirm claims with qualified counsel or your platform's current policy.

06

From a script on a page to a finished video — in an afternoon.

The exact tool pipeline that turns 10 scripts into 10 TikTok-ready videos, plus the ad logic that scales the winners.

The 5-stage content factory

Volume only works if producing a video is cheap and fast. This is the assembly line that makes a full batch of 10 videos a half-day of work — and far less once you build the muscle.

1 Script — AI-assisted (≈3 min)

Generate a batch of 10 scripts on the framework (Hook → Problem → Solution → Proof → CTA), each on a different pillar. Skim, fix the weak one, move on.

2 Visuals — AI image gen (≈30–45 min)

Turn each script into a thumbnail + B-roll stills. The look you want is "my friend's iPhone camera roll," not a magazine spread. Regenerate anything that looks like an ad.

3 Avatars — AI UGC video (≈15–25 min)

Feed each script to an AI-avatar tool (or film real creators) for the talking-head. Vertical 9:16. Generate two takes with different avatars — they test as different creative.

4 Edit & caption — CapCut (≈15 min/video)

Avatar on the main track, B-roll stills on top, bold word-by-word captions, a soft music bed at ~10–15% volume, thumbnail as the cover. Save the first as a template — every next video is drag-and-drop.

5 Post — TikTok Shop / ads (≈10 min)

Tag the product, mirror the hook in the caption, 3–5 hashtags, post 1–2/day rotating the angle. Or run them as Spark Ads.

THE WHOLE PIPELINE, ONE LINE

Script → Images → Avatar video → CapCut edit → TikTok Shop / Ads → live

The scale-the-winner ad logic

Volume gets you at-bats. This is how you find the home run and pour money on it — the same 90%-fail math from Part 01, run on purpose with a budget:

1 Launch wide.

Run all 10 creatives in parallel for 5–7 days at a small daily budget each (\$20–30). You're buying data, not scale yet.

2 Kill the bottom half.

After the test window, cut the worst 50% without sentiment. They already did their job — they told you what doesn't work.

3 Double the top third.

Increase budget on the best 30%. These are your proven at-bats — now you scale the ones the market already voted for.

4 Feed winners back into scripting.

The winning hook/angle becomes the seed for next week's batch. The system compounds — every cycle starts smarter than the last.

The realistic weekly cadence

DAY	ACTION
Mon AM	Generate 10 scripts
Mon PM	Images + avatar videos (mostly queue-and-wait)
Tue	Edit pass in CapCut → upload / launch ads
Wed–Fri	Watch metrics, kill losers, scale winners
Fri PM	Note which hooks won → seed next week

That's **10 fresh creatives every week** from one person — the volume the engine runs on.

07

The sale isn't the finish line. The review is.

The response system that turns reviews, confusion, and even complaints into trust, retention, and repeat GMV.

Turn every review into social proof

On TikTok Shop, your review replies are public — and future buyers read them. A great reply to a bad review sells more than the review costs you. Here's the system, built for the platform's constraints.

The 4-move reply formula

1 Validate first.

"We hear you." / "Fair feedback." Never defensive. You earn the right to educate by acknowledging first.

2 Educate gently.

Correct the misunderstanding without "you're using it wrong." Lead with the one differentiator that resolves it.

3 Close with grace.

"Not every product is for everyone." / "We're here if you have questions." Leave the door open.

4 Stay in the limit.

Public comments are capped (~150 characters on TikTok Shop). No emails, no external links — they're not allowed and they get filtered.

THE CONSTRAINT THAT SHAPES EVERYTHING

~150 characters, no email addresses, no "contact us at..." links. So every reply is tight by necessity. Trim filler first ("really," "just," "totally"), condense the rest. Shorter almost always reads as more confident.

The scenario playbook

Most negative reviews are one of five things. Pre-decide the move for each — then you're never writing from scratch or from emotion. (Vault ships a full response bank.)

SCENARIO	WHAT THEY THINK	YOUR MOVE
Product confusion	"It's just a cheaper [generic]"	Validate → name the one differentiator → invite a retry
Price concern	"Too expensive"	Acknowledge → reframe on value/tech, not price
Didn't work / usage	"It failed"	Empathize → the one usage tip that fixes it
Fit / sizing	"Wrong for me"	Apologize → placement/fit guidance
General negative	Just didn't like it	Validate → thank for trying → graceful close

Positive reviews still get a reply

A fast, warm reply to a happy customer isn't just manners — engagement signals feed the algorithm, and the next shopper sees a brand that shows up. Keep it short: "This made our day — welcome to the fam."

A complaint is a customer giving you **one more chance in public.**

08

Your product. Your margins. Your engine.

How to wire the system to your specific product, price, and sample budget — and the founder decisions only you can make.

Making it your brand's engine

Set your commission so creators actually post

Creators choose which brands to work based on commission and conversion. Too low and your samples sit unused; too high and the math breaks. Anchor it against your gross margin, not a vibe: if ~\$18 GMV comes back per sample, your commission + product cost + shipping on that sample has to leave room underneath. Model it in the Sample → Sale Forecaster before you set the rate.

Turn your sample budget into a media budget

This is the founder unlock. Stop calling samples "marketing cost" and start calling them **inventory deployed at a known return**. Decide how much GMV you want this quarter, divide by your GMV-per-sample, and that's how many well-screened samples you need to ship. Fund *that* number.

FOUNDER MATH WORKED EXAMPLE

Goal: \$15,000 GMV this quarter. At a conservative \$15/sample → ~1,000 samples to ship & brief. If your all-in cost per sample (product + ship + commission share) is under ~\$6, the cohort is contribution-positive before a single repeat purchase. Now it's an operations problem, not a hope.

Build the roster you own

Your affiliate roster is a brand asset that compounds. Every creator who posts and sells once is a warm node for the next launch. Track them (Vault: Campaign Tracker), re-engage your sellers first, and protect the ~\$18 return by keeping the screening gate narrow (Part 04). A big roster of wrong-fit creators is a liability; a screened roster of proven sellers is a moat.

The founder's four levers

LEVER	TURN IT WHEN...
Commission rate	Samples go unclaimed → raise it; margin is thin → tighten screening instead
Sample volume	You want more GMV and the return holds → ship more
Screening strictness	GMV-per-sample drops → tighten; samples unused by good creators → loosen slightly
Brief quality	Videos post but don't sell → the script, not the creator, is usually the problem

09

A plan, not a pep talk.

A 90-day operator's plan to stand up the engine on your product — from first samples to a self-running weekly cadence.

Your first 90 days as a brand

Days 1–30 — Stand up the line

- Open the affiliate program; set commission using the Forecaster.
- Produce your first batch of 10 scripts (Parts 02–03) and one finished brief.
- Start outreach; begin screening with the Scorecard. Ship your first ~50–100 samples to fit creators only.
- Set your compliance checklist as a hard gate on every script.

Days 31–60 — Find your real number

- Track sample → posted → GMV. Compute *your* GMV-per-sample and cost per sale.
- Kill wrong-fit creator segments; double down on the categories that convert.
- Run your first paid test: 10 creatives, small budget, kill bottom half, scale top third.

Days 61–90 — Make it a machine

- Lock the weekly cadence (Part 06) and hand the repeatable parts to a VA.
- Re-engage your proven sellers for a second push / new SKU.
- Replace every "\$18" assumption with your own tracked number and re-forecast next quarter's sample budget.

**The brands that win aren't the most creative.
They're the ones that *kept the machine running*.**

Nine plug-and-play tools

The playbook is the thinking. The Vault is the doing. Every system in these pages ships as a template you can use today — no building from scratch.

TEMPLATE	WHAT IT DOES	FOR YOU
Weekly Content Calendar	The 7-pillar rotation as a fill-in planner — assign angles a week ahead so consistency runs on rails.	
Hook Library & Patterns	50+ plug-in hook skeletons sorted by pattern and awareness stage. Swipe the shape, fill your product in.	
Shot-by-Shot Brief Template	The one-page brief you hand a creator so their video is built on the framework — hook, shots, caption, hashtags.	
Affiliate Creator Scorecard	The screening rubric as a scored sheet — category, human, style, audience, GMV → approve / reject.	START HERE
Sample → Sale Forecaster	Enter samples & your GMV-per-sample; it forecasts GMV and cost per acquisition so you fund the engine, not a guess.	START HERE
Campaign Tracker	One row per creator/campaign: sample → posted → views → GMV. See what's actually working.	START HERE
Compliance Pre-Flight Checklist	The printable claims checklist. Run it on every script before it ships.	
DM & Outreach Scripts	Copy-paste creator outreach + follow-ups that fill the top of the funnel.	
CX Review Response Bank	Ready replies for every review scenario, all under the character limit.	

Delivered as two files: a spreadsheet workbook (calendar, scorecard, forecaster, tracker) and a swipe-file document (hooks, brief, checklist, DM scripts, response bank).

A product is a bet. A system is a business.

You can keep buying lottery tickets one video at a time — or you can run the factory that makes the odds work for you.

Everything in these pages was earned on live shops, real samples, and real GMV. The proof that it's a system and not a fluke is the boring part: the same ~\$18-per-sample return showed up whether the product was a wellness supplement or a plant spray. That's the whole promise — **it travels to your product too.**

Start with Part 04 and the Forecaster. Ship your first hundred screened samples. Watch the number. Then fund more of what works.

LICENSE

Single-buyer license. Use it to run your own shops and clients. Don't resell, repackage, or redistribute the files. The systems are yours to use forever; the document is yours to keep, not to sell.

Now go tap the orange cart.
